## The Cause(s) of Cancer

As of this writing (February 2006), we are being told that there is a flu pandemic approaching that has already killed *106* people worldwide. We are being warned to prepare with vaccines. But, we are in the midst of a pandemic now that is killing millions of people every year and it is cancer. We are not being told how to avoid it, prevent it or cure it.

In 1972, President Nixon declared “war on cancer” and stated that we would have a cure by the end of the decade. After more than 260 billion dollars of research, more people die now than in the 70’s. In his presidential campaign of 1992, Candidate Al Gore declared that “we must slow the rise of cancer.” We have now retreated to a defensive bunker rather than an offensive attack and cancer continues to advance. There is something fundamentally wrong with this picture.

In 1900 cancer (malignant growths) accounted for only 4% of the U. S. deaths; this figure rose to 15% in 1958 when Rachel Carson (*The Silent Spring*) expressed concern it might rise even further. Today we know 1 of every 2.5 Americans will get cancer and, many researchers believe, the figure will rise to virtually everyone by the year 2010.

Cancer is actually more than 100 diseases which are created by multiple causes or exposures and/or accidents. Cancer rears its ugly head only after the cell's DNA or genetic material becomes chronologically damaged or mutated. Cancer normally takes a series of exposures, mutations and/or accidents to be activated.

Unfortunately, the cause(s) of cancer is largely being ignored and/or covered by such catch-all phrases as “it runs in your family (genetic predisposition)” or “we need more research money to determine the cause.” Ignorance is not bliss. If we continue to disregard the obvious, we will get exactly what we deserve...a pandemic of epic proportions.

Attorneys may know more about the causes of cancer than the average doctor. Everyday we are inundated by advertisements that proclaim class action suits for those exposed to benzene, asbestos and other pollutants and contaminants. Unfortunately, litigation won't cure cancer and it only makes us reactive victims rather than proactive champions. The cancer industry is money driven.

We are being exposed to toxic pollution everywhere; smog, industrial waste, auto emissions, pesticides, cigarette smoke, synthetic additives/preservatives, spills, electromagnetic fields and hazardous wastes now are commonly found contamination our air, water, food, and soil, so much so that our natural detoxification process cannot function effectively.

Of the four things that cause cancer, *stress, radiation, chemicals and diet*, all of these must be eliminated or at least reduced to help effect a reversal. We will discuss these in detail.

However, I want to add a sidebar to the above statement. If these are known causes of cancer, why would I elect to choose radiation and/or chemo-therapy as a remedy? Will these lengthen my life? I have often advised clients to ask their oncologists two questions...

1. "If 100 patients did exactly what you tell them as a course of treatment, how many would walk out of your office cured?"

*Answer: 3-5*

2. "Of those who are "cured", how many will have a re-occurrence in 5 years?"

*Answer: 100%*

Approved, standard and accepted methods for treating cancer (with some notable exceptions...e.g. lymphoma) do not have a very high rate of success. Lymphoma, by the way, responds to chemo' and radiation simply because they destroy white cells *not* the cause of the high white count which may be chemically or parasite induced.

Many cancer patients have a very high eosinophil count (a condition called eosinophilia). Eosinophils are a specific form of white cells that appear as a result of allergies, parasites or both. Since parasites and candida deplete the body of B<sub>12</sub>, the result is often allergies and, in severe cases, myeloblastic anemia and leukemia.

### **The Best Defense is a Good Offense.**

Understanding the disease is the first line of defense. What we know about cancer is that

1. Cancer cannot live in oxygen
2. Cancer must have sugar to survive
3. Cancer requires a low pH
4. Cancer thrives in low immunity

Cancer requires nitrogen to survive. That means sugar...in any form. Several things occur as cancer begins to grow; angiogenesis and gluconeogenesis. Angiogenesis is the process of new blood vessel formation within the body. Gluconeogenesis is cancer's "feeding" mechanism. To support its voracious appetite for sugar (cancer consumes 4-5 times the amount of sugar of a normal cell) cancer builds its network of capillaries and grows faster as it gets larger.

I have actually had cancer patients (on chemo' and radiation) tell me that their energy levels were so low that their Dr. told them to eat candy bars for energy! Yikes!

Another factor then enters the equation and that is the massive free radical damage caused by cancer. This is the inability of the body to effectively utilize oxygen. Cancer cannot live in oxygen and, simply speaking, effectively causes the body to produce huge

amounts of free radicals or oxidized red blood cells. The addition of free radical scavengers (anti-oxidants) are of paramount importance to keep the blood oxygenated.

We suggest 2 capsules of Aptinol<sup>1</sup> 3x daily for intensive use and 1 capsule 2x daily for maintenance.

The first line of defense then is dietary change. There are cases of cancer being cured by diet alone. See Dr Lorraine Day's website at <http://www.drday.com>

Elimination of sugars and toxins in the human body are absolutely key to fighting and winning the battle. There is no magic bullet. It is a multi-pronged attack. Toxins include chemicals and hormone imbalances. Breast, lung and ovarian cancers are caused by high amounts of estrogen, especially in women on HRT (hormone replacement therapy), birth control pills and diets high in hormones.

A cancerous tumor sends out a hormone known as HCG (human chorionicgonadotrophin). (This is the same hormone which is detected by home pregnancy test) . This hormone is also the same hormone given off by embryonic cells following conception during the first months of pregnancy. An embryonic cell and a cancer cell are essentially the same. After conception the cells which are growing to produce the embryo are rapidly growing cells, the same as cancer cells. Over a certain period of time genetic factors as well as certain pancreatic enzymes play a role in slowing the growth of the fetal cells. The production of this hormone plays an important part in blocking the immune system from attacking the cells. (If you've never thought about it why does the immune system not attack a fetus? Because of HCG.) This hormone gives off a negative charge (-) and the white blood cells of the immune system also obtain the characteristic of a negative (-) charge. Thus two like charges repel each other. (A similar example is holding two magnets together with the same poles facing.. You can feel them pushing against each other. This is the same effect between the immune system and the hormone which protects the cancer cells as well as the fetal cells.)

We always advise enzyme therapy as an adjunct to fighting cancer. We recommend 5 Trimazyme, 3x daily to help dissolve this HCG hormone coating.

Hormone ingestion comes from many sources; factory farming techniques which includes injecting hormones into livestock and chickens, water supplies improperly treated and some GMO foods.

Stress and/or negative emotions are also linked to degenerative diseases such as cancer. Eliminating these is also part and parcel of the cancer protocol. There are several ways to do this. One way is through the use of "guided" meditations and another is Ezov.<sup>2</sup>

---

<sup>1</sup> Aptinol is a proprietary blend of grapeseed, pinebark, quercetin and Adaptogens.

<sup>2</sup> Ezov is Hebrew for hyssop and is a breakthrough supplement taken at bedtime to release negative emotions (available from [https://www.nutramedix.com/store/comersus\\_index.asp](https://www.nutramedix.com/store/comersus_index.asp))

Another line of defense is total detoxification of the liver. Liver detoxification is discussed in the end notes.<sup>i</sup> **This is the very first thing you must do.**

Elimination of parasites is also a key factor in maintaining good health. There are many researchers and parasitologists who believe that cancer is caused by parasites. While I am not totally convinced, I do know that parasites set up housekeeping in the body by changing the environment in which they live...you! One thing they require is a lowered pH. Cancer needs an acid environment to survive, therefore it is imperative to eliminate parasites with a good parasite cleanse.

We are being bombarded every day by electromagnetic fields (EMF). These fields are produced by television, cell phones, satellites, etc., and this explosion of radiation is affecting our health in a myriad of negative ways. While there is no way to wrap yourself in an EMF protecting cocoon, there are devices that can convert these EMF's into more innocuous frequencies.

“My working hypothesis is that, besides strengthening the natural bioenergy of a person, [Q-links] also appears to clarify the electromagnetic forces themselves. The combination of both would positively change the way electromagnetic fields interact with the body. My intuition and logic suggest that [Q-links] type products will be an important part of humanity's future.”<sup>3</sup>

These units are called “Q-Links” and are worn over the thymus. They are so effective in balancing the body's bio-field<sup>4</sup> that they are endorsed by the PGA.

Finally, there are “alternative” treatments that surpass “standard” cut, burn and poison methods.<sup>ii</sup>

Supplements with proven track records are a must. Squalene (shark liver oil) from Scandanavia has the ability to cut off the blood supply to tumors. "Squalene blocks the growth of blood vessels into a tumor, and therefore, it blocks the tumor's growth, not because it kills the tumor cells, but because it simply cuts off their blood supply if you will."<sup>5</sup>

No one is quite sure what the mechanism for this anti-angiogenic property is and many studies are underway to find out why. In the meantime, we suggest 15 mg per pound of bodyweight, divided into 3 doses over the course of a day, not to exceed 5,000 mg per day.

B<sub>17</sub> is a proven cancer fighter. Remember laetrile? B<sub>17</sub> contains cyanide which goes directly to cancer cells. It is *very* specific. Many foods contain B<sub>17</sub>, as well. They include: Apple seeds, alfalfa sprouts, apricot kernels, bamboo shoots, barley, beet tops, bitter

---

<sup>3</sup> William Tiller, Ph.D. Professor Emeritus, Stanford University and Guggenheim Fellow, USA

<sup>4</sup> Bio-field is a term adopted by the National Institutes of Health in 1994 acknowledging the research that shows the subtle energy field that extends beyond our physical body.

<sup>5</sup> Dr. Allen Sill, Johns Hopkins University

almond, blackberries, boysenberries, brewer's yeast, brown rice, buckwheat, cashews, cherry kernels, cranberries, currants, fava beans, flax seeds, garbanzo beans, gooseberries, huckleberries, lentils, lima beans, linseed meat, loganberries, macadamia nuts, millet, millet seed, peach kernels, pecans, plum kernels, quince, raspberries, sorghum cane syrup, spinach, sprouts (alfalfa, lentil, mung bean, buckwheat, garbanzo), strawberries, walnuts, watercress, yams. So diets that are high in these anti-cancer foods are also recommended.

The highest commercially available B<sub>17</sub> is found in raw apricot seeds. **YOU MUST START VERY, VERY SLOWLY WITH B<sub>17</sub> AS IT *WILL* CAUSE NAUSEA IF STARTED TOO QUICKLY.** If the dosage is worked up to then you won't have any problems. We suggest beginning with one apricot seed once daily for 2 days then one seed twice daily for two days, one seed three times daily for 2 days, then 2 seeds in the a.m & 2 seeds in the p.m (4 /day) for 2 days then 2 seeds a.m & p.m and 1 additional seed at bedtime for 2 days, finally beginning 2 seeds three times daily as the treatment dose. You can certainly modify this schedule but we have found this the most useful. The most important thing is just working the doses up slowly over a 1-2 week period.

Rife technology. This is not really new. Royal Raymond Rife, a researcher in San Diego, Ca., cured 416 cases of terminal cancer out of 416 in the mid-30's using what he called his Beam Ray. Yet, the units were outlawed in 1939 and Rife spent years in court being vilified and hounded.

Today, these units are available in many high tech forms. While they cannot be deemed cancer cures or treatments, they can be purchased and used for individual use. Mediverse has small inexpensive units made in Germany that are less expensive and will help set up an environment in which parasites and pathogens have difficulty living.<sup>6</sup>

Rife units are not a cure all and cancer must be addressed with a multifaceted approach. Raising pH is vital to treat cancer and disease. So a word about pH is in order.

pH is a measurement of the potential for hydrogen in a substance. 7 is considered neutral and every move of 1/10<sup>th</sup> of a point is double...sort of a human Richter scale. There are disputes about what optimum pH should be, but a number between 6.9 and 7.4 is optimum.

### **How do you measure pH and how do you adjust it?**

The simplest and most effective way to measure pH is what we call the lemon test. Upon arising in the morning, bite into a lemon wedge. Wait about 2 minutes and place a pH strip on your tongue. Immediately compare the color with the chart included in your litmus strips.

---

<sup>6</sup> The Biowave 21 LCD units are about 240 Euro and are pre-programmed. For additional frequencies other chips may be purchased at a low cost. See the website <http://www.biocytomics.com/biowave.html> for details. These are for research purposes only and no medical claims are made or implied.

If your pH is in the above mentioned range, terrific. If not, some dietary adjustments need to be made; specifically your diet must consist of alkaline forming foods.

---

<sup>i</sup> Liver and gallbladder cleanse without surgery

Ingredients

**1/2 Cup Olive Oil Extra Virgin**

**1 Big grapefruit (2 small) (Or 3 lemons)**

**4 tablespoon EPSOM salts = ( MgSO<sub>4</sub> + 7H<sub>2</sub>O)**

**(EPSOM salts = Magnesium Sulphate = EPSOMITE = Magnesium Sulfate Heptahydrate)**

**3 cups water**

**You can substitute 3 cups water that is used in this recipe to dissolve Epsom salt) with 3 cups freshly pressed grapefruit juice, or freshly pressed apple juice . That way you will not feel unpleasant taste of Magnesium Sulphate ( = Magnesium Sulfate = Epsom salt = MgSO<sub>4</sub> + 7H<sub>2</sub>O) ]**

**If using lemon juice, do not blend juice with oil.  
Drink a little oil, a little juice, from 2 different cups.**

**If you mix oil and juice, it may (it doesn't always happen) slightly congeal, and get a slimy consistency that is not easy to swallow.**

**This never happens with grapefruit juice!**

---

Choose a day like Saturday for the cleanse since you will be able to rest the next day.

Take no medicines, vitamins or pills that you can do without, they could prevent success. Stop the parasite program and kidney herbs too, the day before.

Eat a no-fat breakfast and lunch such as cooked cereal with fruit, fruit juice, bread and preserves or honey (no butter or milk), baked potato or other vegetables with salt only. This allows the bile to build up and develop pressure in the liver. Higher pressure pushes out more stones.

**2:00 PM.** Do not eat or drink after 2 o'clock. If you break this rule you could feel quite ill later. Get your Epsom salts ready. Mix 4 tbs. in 3 cups water and pour this into a jar. This makes four servings, 3/4 (three fourths) cup each. Set the jar in the refrigerator to get ice cold (this is for convenience and taste only).

---

**You can substitute 3 cups water with 3 cups freshly pressed grapefruit juice, or freshly pressed apple juice, it tastes better.**

**6:00 PM,** Drink one serving 3/4 (three fourths cup) of the ice cold Epsom salts. If you did not prepare this ahead of time, mix 1 tbs. in 3/4 (three fourth) cup water now. You may add 1/8 (one eighth) tsp. vitamin C powder to improve the taste. You may also drink a few mouthfuls of water afterwards or rinse your mouth. Get the olive oil (ozonated, if possible) and grapefruit out to warm up.

**Alternative Schedule 1:** Omit the first Epsom Salts dose at 6 p.m. Take only one dose, waiting till 8 p.m. Change nothing else. Many people still get stones with one less dose. If you do not, do the full course next time. "The Cure For HIV and AIDS" By Hulda Clark pg.585

**8:00 PM.** Repeat by drinking another 3/4 (three fourths) cup of Epsom salts. You haven't eaten since two o'clock, but you won't feel hungry. Get your bedtime chores done. The timing is critical for success.

**9:45 PM.** Pour 1/2 (half) cup (measured) olive oil into the pint jar. Add 2 drops HCl to sterilize. Wash grapefruit twice in hot water and dry; squeeze by hand into the measuring cup. Remove pulp with fork. You should have at least 1/2 (half) cup, more (up to 3/4 (three fourths) cup) is best. You may use part lemonade. Add this to the olive oil. Also add Black Walnut Tincture. Close the jar tightly with the lid and shake hard until watery (only fresh grapefruit juice does this).

Now visit the bathroom one or more time, even if it makes you late for your ten o'clock drink. Don't be more than 15 minutes late. You will get fewer stones.

**10:00 PM.** Drink the potion you have mixed. Take 4 ornithine capsules with the first sips to make sure you will sleep through the night. Take 8 if you already suffer from insomnia. Drinking through a large plastic straw helps it go down easier. You may use oil and vinegar salad dressing, or straight honey to chase it down between sips. Have these ready in a tablespoon on the kitchen counter. Take it all to your bedside if you want, but drink it standing up. Get it down within 5 minutes (fifteen minutes for very elderly or weak persons).

Lie down immediately. You might fail to get stones out if you don't. The sooner you lie down the more stones you will get out. Be ready for bed ahead of time. Don't clean up the kitchen. As soon as the drink is down walk to your bed and lie down flat on your back with your head up high on the pillow. Try to think about what is happening in the liver. Try to keep perfectly still for at least 20 minutes. You may feel a train of stones traveling along the bile ducts like marbles. There is no pain because the bile duct valves are open (thank you Epsom salts!). Go to sleep, you may fail to get stones out if you don't.

---

**Next morning.** Upon awakening take your third dose of Epsom salts. If you have indigestion or nausea wait until it is gone before drinking the Epsom salts. You may go back to bed. Don't take this potion before 6:00 am.

**2 Hours Later.** Take your fourth (the last) dose of Epsom salts. You may go back to bed again.

"The Cure For HIV and AIDS" By Hulda Clark pg.585

**Alternative Schedule 2:** After taking the first dose of Epsom salts in the morning, wait two hours and take a second dose of the oil mixture (but only 1/2 cup) and go back to bed. After two more hours take another dose of Epsom salts. This schedule can increase the number of stones you remove."

**After 2 More Hours** you may eat. Start with fruit juice. Half an hour later eat fruit. One hour later you may eat regular food but keep it light. By supper you should feel recovered.

### **How well did you do?**

Expect diarrhea in the morning.

Use a flashlight to look for gallstones in the toilet with the bowel movement.

Use colander to make sure you collect all stones.

Look for the green kind since this is proof that they are genuine gallstones, not food residue. Only bile from the liver is pea green. The bowel movement sinks but gallstones float because of the cholesterol inside.

Calcified stones and stones containing protein may sink, but a colander will catch all stones.

Count them all roughly, whether tan or green. You will need to total 2,000 stones before the liver is clean enough to rid you of allergies or bursitis or upper back pains permanently. The first cleanse may rid you of them for a few days, but as the stones from the rear travel forward, they give you the same symptoms again. You may repeat cleanses at two week intervals. Never cleanse when you are ill.

Sometimes, the bile ducts are full of cholesterol crystals that did not form into round stones. They appear as a "chaff" floating on top of the toilet bowl water. It may be tan colored, harboring millions of tiny white crystals. Cleansing this chaff is just as important as purging the stones.

How safe is the liver cleanse? It is very safe. My opinion is based on hundreds of cases, including many persons in their seventies and eighties. None went to the hospital; none

---

even reported pain. However it can make you feel quite ill for one or two days afterwards, although in every one of these cases the maintenance parasite program had been neglected. This is why the instructions direct you to complete the parasite and kidney rinse program first.

This procedure contradicts many modern medical viewpoints. Gallstones are thought to be formed in the gallbladder, not the liver. They are thought to be few, not thousands. They are not linked to pains other than gallbladder attacks. It is easy to understand why this thought: by the time you have acute pain attacks, some stones are in the gallbladder, are big enough and sufficiently calcified to see on X-ray, and have caused inflammation there. When the gallbladder is removed the acute attacks are gone, but the bursitis and other pains and digestive problems remain.

The truth is self-evident. People who have had their gallbladder removed surgically still get plenty of green, bile coated stones, and anyone who cares to dissect their stones can see that the concentric circles and crystals of cholesterol match textbook pictures of "gallstones" exactly.

## **ii Another Encouraging Treatment!**

### **BOTANICAL SURGERY: ESCHAROTIC (DRAWING) SALVES**

Escharotic salves and pastes represent a botanical approach to cancer treatment. They are mostly applied topically, but can also be taken internally.

The efficacy of a well-prepared cancer salve is 100%. This doesn't mean that it is the appropriate treatment for all cancers, but when applied, it always works.

What is this medication, and what does it do?

The cancer salve is a paste, made of native American herbs, that is placed on a small spot on the skin, close to a diagnosed or suspected malignancy. The salve will cause the skin to react, but if there is no malignancy, nothing will happen. However, if there is a tumor present within the tissue under the selected spot, the salve forces the body to eject the tumor by bringing it to the surface, until it completely emerges and detaches itself from the skin. The process usually begins by puss-like fluid oozing through the lesion, then within 2-3 weeks the main tumor will emerge, without the need for any interference, and with no danger of metastasis. In some cases the tumor doesn't come out as a solid object, but as thick fluid, or, in the case of prostate cancer, for instance, as a number of small, jelly-like globules. Should the cancer be melanoma, or another type of skin cancer, the salve will eliminate the condition through topical action.

Escharotics, as a cancer treatment, have a long history in North American

---

medicine. Even as recently as during the past two decades, thousands of people used this method to get rid of their cancers. We managed to talk to dozens of women who treated themselves with breast cancer, or were helped by an expert in using the salve. One of them is an MD who brought out a tumor from her breast by this method. We were able to find only two NDs on the whole continent who have experience with the salve, and can be consulted on its use. One of them recently published a very well written and instructive book on the subject.

For someone to whom escharotic treatment is a completely alien concept, it is difficult to accept that breast cancer can be taken care of within a few weeks, at a cost of less than \$100. Of course, if the tumor is very large, or there are other complications, the treatment must be prepared very carefully. It is always important for the person undergoing such treatment to place him/herself under the guidance of a holistic physician, who understands the whole procedure. Otherwise the patient may panic as the site opens up. At that stage, running to an oncologist or a doctor who has no idea of what is happening will likely result in totally unnecessary and dangerous surgical intervention. The emerging matter must be kept sterile until it is ready to completely detach itself from the skin. The process may cause some discomfort, mainly an itching or burning sensation that can be controlled by the use of colloidal silver, a special silver hydrosol product sprayed regularly on the site.

We strongly encourage alternative doctors to participate in seminars where this remarkable cancer treatment would be explained to them. It cannot be emphasized enough how important it is to consult with as many advisors as possible on this matter. There are experts who bring out deep, inoperable tumors from the most unlikely locations within the body by applying the salve topically. It is obvious that this whole field is unexplored, and it is vitally important to build a data bank and share it with everybody. EMI will assist those who are interested in forming a group and attending a workshop with one of the experts. Please keep in mind that almost any cancer, even if sometimes as a last resort, can be treated in this manner. This is not to say that the salve should be regarded as a mono-therapy. It should always be part of an integrated protocol. Having said that, let us state in no uncertain terms: When a woman is diagnosed with a tumor in her breast, before any surgical intervention, even before a biopsy, an expert should be contacted and a treatment with escharotics should be discussed. Chances are that the cancer can be eliminated without danger, at a very modest cost. Inoperable brain tumors were drained through a lesion on the neck with this method, and lung cancer has been successfully treated with the salve. All these positive results do not mean that this therapy is without risk. No one should enter self treatment recklessly, without the supervision of a knowledgeable practitioner.

Although completely unknown by virtually all physicians, escharotics have a century-old history of medical use. Like so many other natural modalities, it has been suppressed and totally eradicated from standard medical practice. It is one of the greatest tragedies of current medical policy that women, who should have no

---

more difficulty getting rid of a newly diagnosed breast cancer than of a flu or the common cold, are subjected to mutilation, and are dying by the thousands from this condition.

At this point the question can be raised, and not without justification: is this whole presentation some elaborate scam? Is it possible that such a dread disease like breast cancer, that claims the lives of hundreds of thousands of women, can be eliminated with a ridiculously simple and cheap method? If this is true, where are the headlines? The announcements? Even the Nobel prize?

We don't discuss political and philosophical issues in our literature. Our task is to present solutions, and make these solutions accessible to our readers. Keep in mind that although the cancer salve may appear a little more bizarre than some other treatments, it is not an exception where complete blackout of its efficacy is concerned. Like many other treatment modalities that completely disappeared from the practice of orthodox medicine, the cancer salve, too, was well known among physicians in England and North America.

Dr. Ingrid Naiman tells us in her book the following:

“Dr. J. Weldon Fell was one of the founders of the New York Academy of Medicine. In 1858 he published his studies on the treatment of cancer, particularly breast cancer, with escharotics. For many years he treated patients with remarkable success using the salve.

”John Pattison, MD, published his studies on the cancer salve in 1866. He reported on thirteen years of experience, with over four thousand cancer patients. Dr. Pattison had also been affiliated with the New York University.

”Dr. Eli G. Jones, MD, Ph.D., a homeopath as well as a member of the American Association of Physicians and Surgeons, published his studies on the use of the cancer salve in 1911, as the result of over forty years of experience, with more than 20,000 cancer patients. He also held training seminars from as early as 1894. By the turn of the century, cancer salves were available in most corner drug stores in the United States.

”Perry Nichols, MD, operated a highly respected private sanatorium for cancer patients. He treated 19,000 patients over the course of more than thirty years. In his treatments he relied almost exclusively on the use of escharotic salves.

”Dr. John Christopher, a naturopathic doctor, died in 1983. He used escharotic salves in his treatment of cancer in conjunction with internal herbal tonics, tinctures, and teas. He developed his therapeutic methods to a high level of effectiveness, and achieved a very high rate of success.”

---

These are but a few examples, taken from Dr. Ingrid Naiman's remarkable book, "Cancer Salves, A Botanical Approach to Treatment". Dr. Naiman, a renowned naturopathic doctor and herbalist, researched the subject for eight years. It is a clear indication of the need for, and the interest in this information that within two months from the date of its publication, 6,000 copies of the book were sold. It is most unlikely that this "secret treatment" will remain a secret for long. The book is a treasure house of practical, therapeutic information.

For those who wish to obtain the salve either for internal or external use, several sources exist. Although all of them provide some instruction, none of them should be used without the guidance of a practitioner who is trained in this modality.

There is no doubt about the well demonstrated fact that it is possible to remove tumors with escharotic salves. The point on which all doctors, using the salve, historically agreed upon, is that the removal of the tumor is not equivalent with a cure. The salve, if it is selected as a treatment, should always be part of an integrated protocol that includes dietary changes and supplementation.

NAME OF TREATMENT: Escharotic Salves

SOURCES:

We strongly recommend that you contact Two Feathers, Inc., Mr. Robert Roy, P.O. Box 8033 Reno, Nevada 89507-8033. Tel: 775-324-4889. I have interviewed him several times on my radio show and find him to be a pleasant and informative gentleman. Please tell him Dr. Smith recommended his company. This formula can be taken orally, applied topically, or used in an enema. (We were told in my interviews with Mr. Roy, that salve enemas are particularly useful with tumors or malignant polyps in the intestine.) Individual cases can be discussed in detail with Mr. Roy. He taught over 20 thousand persons how to use the compound. We strongly recommend you visit his Web site, where detailed instructions and many important information about the salve can be found:

<http://www.healingformula.net/>

COST OF TREATMENT: The substance itself generally costs between \$100 and \$200 for the whole course. The cost of consultation and guidance varies with each practitioner, but it is not extravagant.

---

## Company Profile

BioCytonics is a division of Old Loft Enterprises, LLC, a Nevada Limited Liability Corporation.

Hugh Smith, Ph.D., founder of Biocytonics is an internationally respected and well known researcher in chronic illnesses and mycoplasma infections. Many M.D.'s depend on Dr. Smith for consultation and often refer their "difficult" patients to him for help.

His background in microscopy represents over 25 years of research in nutrition, bio-psychology, bio-energetics and **Targeted Nutritional Intervention-TNI**. Dr. Smith writes for several magazines, researches for nutrition companies as well as the design of training programs for health care professionals interested in adding nutritional counseling to their practices. His expertise in nutrition is represented in nationwide seminars.

Based upon his clinical observations, Dr. Smith has developed several innovative products designed to slow the aging process and naturally combat chronic illnesses. Nutritional counseling is effective with ADD/ADHD, fibromyalgia, chronic fatigue syndrome, irritable bowel syndrome, weight loss, arthritis, candidiasis and more.

Dr. Smith specializes in Vital Hematology (or Real Time Microscopy) as a means of observing cell wall deficient forms and the living blood (BioCytonics) of clients to recommend nutritional interventions to reverse risk factors for chronic disease and nutritional deficiencies. If an individual is interested in scheduling a consultation, please e-mail for details and fee schedules to [Hugh@biocytonics.com](mailto:Hugh@biocytonics.com) or call the office at 760-613-8645.

Initial client visit includes the observation of living blood and nutritional counseling for chronic illness and potential risk factors.

Dr. Smith also trains healthcare practitioners in the study of living tissue. For details and information please e-mail [hugh@biocytonics.com](mailto:hugh@biocytonics.com) or call 760-809-4498.
